

# VACCINATION DURING PREGNANCY

1

You aren't just protecting yourself—vaccines during pregnancy give your baby some early protection too!

2

Respiratory syncytial virus (RSV) vaccination is recommended seasonally during weeks 32 through 36 of pregnancy to protect babies against RSV.

3

COVID Vaccination is still safe and effective during pregnancy. You can get the updated COVID vaccine at any point if the pregnancy.

4

If you are pregnant or breastfeeding, it is still recommended to get the COVID-19 vaccine if: You're 18 or older and you haven't yet gotten a COVID-19 vaccine. Or you're vaccinated and your last dose was before September 2022.

5

Encourage those you know will be interacting with your baby to get vaccinated as well! This will help protect your baby after they are born.
